                                                                                                                                                                                                                                                                                                                                                    obesity; diabetes; infectious disease; neurodegenerative disorder; acne; Alzheimer's disease, Parkinson's disease; immune disorder; cancer; haematopoietic disorder; cirrhosis; pancreatitis; learning defect; memory defect; infertility; congenital heart defect; hair growth; pigmentation disorder; endocrine disorder; respiratory disease; health; gastro-intestinal disease; reproductive; neurological disease; health; bone marrow transplantation; endocrine disease; allergy; inflammation; nephrological disorder; urinary system disorder; age-related disorder; neuropsychiatric disorder; EGF-related, SCUBBI; TEN-M4; adipocyte complement-related City tumour necrosis factor; out at first; beta adrenergic receptor kinase; Ephh6/ehk-2; glucose transporter; type la membrane sushi-containing domain; butyrophilin;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention relates to cDNAs encoding TANGO 244, TANGO 246, TANGO 275, TANGO 300 and MANGO 245 proteins.

The nucleic acids, proteins and protein modulators are useful for treating colonic disorders, inflammatory diseases, tumors, renal disorders, liver disorders, lung disorders, autoimmune diseases, allergic diseases, cardiovascular diseases, brain disorders, degenerative diseases placental, pancreatic, skeletal and muscle
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      05-NOV-2002
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ABG70386 standard;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             disorders.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               믕
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention relates to new NOVX polypeptides. The invention is cuseful for treating or preventing a NOVX-associated disorder such as CC cardiomyopathy or atheroserosis, where the disorder is related to cell cisqual processing and metabolic pathway modulation in a subject, competerably human. The invention is also useful for treating metabolic disorders (e.g. obesity), diabetes, infectious disease, neurodegenerative codisorders (e.g. Alzheimer's disease, Parkinson's disease), immune competers, haematopoietic disorders and various cancers. The molecules of the invention are also useful for treating or preventing cirrhosis, comparatitis, learning and memory defects, infertility, congenital heart conservatives, acne, hair growth, pigmentation disorders, endocrine disorders, respiratory disease, gastro-intestinal diseases, reproductive, health, conservations inflammation, nephrological disorders, urinary system conservations inflammation, nephrological disorders, urinary system conservations inflammation, nephrological disorders urinary system conservations and age-related disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Best Loc

                                                                                                                                                                                                                                                                                                                                                                                                                     Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention relates to new NOVX polypeptides. The invention is CC useful for treating or preventing a NOVX-associated disorder such as CC cardiomyopathy or atherosclerosis, where the disorder is related to cell city signal processing and metabolic pathway modulation in a subject, CC greferably human. The invention is also useful for treating metabolic city disorders (e.g. obesity), diabetes, infectious disease, neurodegenerative CC disorders (e.g. Alzheimer's disease, Parkinson's disease), immune CC the invention are also useful for treating or preventing cirrhosis, the invention are also useful for treating or preventing cirrhosis, CC gancreatitis, learning and memory defects, infertility, congenital heart CC respiratory disease, gastro-intestinal diseases, reproductive, health, CC neurological diseases, bone marrow transplantation, endocrine diseases, CC allergy and inflammation, nephrological disorders, urinary system CC disorders, neuropsychiatric disorders and age-related disorders.
                                                                                                                                                                                                                                                                                                                                                      Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present sequence is human ZACRP4 protein. ZACRP4 protein has two complement factor C1q domains. The ZACRP4 gene is located on human chromosome l1q11. The ZACRP4 coding sequence and protein have a number of uses described in the specification, including, modulatation of energy balance and cellular metabolic reactions in mammals. In addition, ZACRP4 protein is useful as an autocrine factor, particularly during development, in mediating the processes of an organism, in regulating cellular processes such as cell proliferation and/or differentiation, cell survival and energy balance.

                                                                                                                                                                                                                                                                                                                                                                          useful in the diagnosis, treatment and prevention of cell proliferative (e.g. actinic keratosis, arteriosclerosis, bursitis, hepatitis or cancer), autoimmune/inflammatory (e.g. AIDS (acquired immunodeficiency syndrome), asthma, anaemia, allergies or atopic dermatitis), cardiovascular (e.g. congestive heart failure, ischaemic heart disease, myocardial infarction, hypertensive heart disease, or vascular tumours), neurological (e.g. epilepsy, stroke, cerebral neoplasms, or Alzheimer's disease), and developmental (e.g. renal tubular acidosis, Cushing's syndrome, Duchenne and Becker muscular dystrophy, or hypothyroidism) disorders. Many other diseases and disorders are listed in the specification. These may also be used in assessing the effects of exogenous compounds on the expression of nucleic acid and amino acid sequences of the secreted proteins. The present sequence represents a RECP protein of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to twenty four human secreted proteins (SECP1-24), proteins 90% identical to them and active fragments of them. Also included are nucleic acids encoding the SECP proteins, a recombinant polynucleotide comprising a promoter sequence operably linked to the nucleic acid, a cell transformed with the recombinant polynucleotide, a transgenic organism comprising the recombinant polynucleotide, an anti-SECP antibody, and screening for ant/agonists and modulators of SECP function or expression. The SECP proteins and mucleic acids are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New human secreted proteins and nucleic acids useful in diagnosing, treating and preventing cell proliferative, autoimmune/inflammatory, cardiovascular, neurological, and developmental disorders -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          26-FEB-2001;

    The present invention relates to cDNAs encoding TANGO 244, TANGO 246, TANGO 275, TANGO 300 and MANGO 245 proteins.

The nucleic acids, proteins and protein modulators are useful for treating colonic disorders, inflammatory diseases, tumors, renal disorders, liver disorders, lung disorders, autoimmune diseases.
                                                                                                                                                    Isolated cDNAs encoding TANGO 244, TANGO 246, TANGO 275, TANGO 300 and MANGO 245 proteins, useful in the treatment of inflammatory diseases (e.g. idiopathic ulcerative colitis); tumors, renal disorders and liver disorders (e.g. jaundice) -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention relates to cDNAs encoding TANGO 244, TANGO 246, TANGO 275, TANGO 300 and MANGO 245 proteins.

The nucleic acids, proteins and protein modulators are useful for treating colonic disorders, inflammatory diseases, tumors, renal disorders, liver disorders, lung disorders, autoimmune diseases, allergic diseases, cardiovascular diseases, brain disorders, degenerative diseases placental, pancreatic, skeletal and muscle
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  TANGO; MANGO; colon; inflammation; tumor; renal; liver; lung; autoimmune; allergy; cardiovascular; brain; degenerative; placental; pancreatic; skeletal; muscle.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ន្តន្តន្តន្ត
Sequences AAY52377-Y52385 are involved in pilus synthesis and motility and are required for biofilm formation by Pseudomonas aeruginosa. The CC formation of bacterial biofilms occurs when bacteria make the transition from a planktonic (free swimming) existence to a lifestyle in which the microorganisms are firmly attached to biotic or abiotic surfaces. This cransition is thought to be regulated in part by the mutritional status of the environment and is accompanied by a change in gene expression cc patterns, cellular physiology and higher resistance to antibiotics relative to planktonic bacterial counterparts. Pilus synthetic and contility genes, gene products, and transcriptional control regions may call be used for the control of biofilm formation in fields such as manufacturing, agriculture, and healthcare. The products may also be used to identify compounds which modulate biofilm formation. Compounds that stimulate biofilm formation can be used to improve colonisation of plant roots by beneficial bacteria (e.g., nitrogen fixing bacteria). Cc conversely, compounds that inhibit biofilm formation can be used to restrict the growth of bacteria on contact lenses, medical implants ce.g., artificial hips), the walls of catheters, fluid contacting
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Query Match

                                                                                                                                                             The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL101840-ABL16175) and the encoded proteins (ABB7037-ABB72072).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Drosophila melanogaster polypeptide SEQ ID NO 23451.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            surfaces of industrial devices, water and sewerage pipes, and within the lungs of infected patients. The inhibitor compounds can also be applied to soil, seeds or plant roots to inhibit bacterial growth.

As a vascular endothelial CC cadherin it promotes cell-to-cell homotypic adhesion and its CC expression is upregulated in proliferating endothelial cells in CC expression is upregulated in proliferating endothelial cells in CC anglogenesis and inhibiting pathological conditions such as tumours, CC anglogenesis and inhibiting pathological conditions such as tumours, CC encovascular glaucoma, proliferative retinopathy including proliferative CC diabetic retinopathy, macular degeneration, hemangiomas, angiofibromas, and psoriasis. It may also be used for the prevention or inhibition of leukocyte infiltration, tumour cell metastasis, or endothelial CC permeability, as a vaccine and for making endothelial junctions more permeable to antigens, thus indicating use of the modifiers for treatment or prevention of acute and chronic inflammatory diseases, corgan transplantation, myocardial ischaemia, atherosclerosis, rheumatoid architection, infection. It may also be used for detection,

The polypeptides may be used as antigens in the production of antibodies specific for P. acnes proteins. These antibodies can be used to downregulate expression and activity of P. acnes polypeptides and therefore treat P. acnes infections. The antibodies may also be used as diagnostic agents for determining P. acnes presence, for example, by enzyme linked immunosorbent assay (ELISA).

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequences AAU39105-AAU68017 represent Propionibacterium acnes immunogenic polypeptides. The proteins and their associated DNA sequences are used in the treatment, prevention and diagnosis of medical conditions caused by P. acnes. The disorders include SAPHO syndrome (synovitis, acne, pustulosis, hyperiosis and osteomyelitis), uveitis and endophthalmitis. P. acnes is also involved in infections of bone, joints and the central

                                                                                                                                                                                                                 The invention relates to isolated polynucleotide (I) and collypeptide (II) sequences. (I) is useful as hybridisation probes, (C polymerase chain reaction (PCR) primers, oligomers, and for chromosome (C polymerase chain reaction the primers, oligomers, and for chromosome (C polymucleotides are also used in diagnostics as expressed sequence tags (C for identifying expressed genes. (I) is useful in gene therapy techniques (C to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as (C a food supplement. (II) and its binding partners are useful in medical (II) imaging of sites expressing (II). (I) and (II) are useful for treating (II) disorders involving aberrant protein expression or biological activity. (II) and (II) are useful for treating (II) disorders involving aberrant protein expression or biological activity. (II) and (II) are useful for treating (III) are useful for treating (III) are useful for treating (III) and (III) are useful for treating (III) and (III) are useful for treating (III) and (III) are useful for treating (III) are useful for treating (III) and (III) are useful for treating (III) are useful for treating (III) and (III) are useful for treating (III) and (III) are useful for treating (II

            Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      DB 80

ö

PSEUDOMONAS

```
GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: MATC J. RUBERFIELD ACID AND AMINO ACID SEQUENCES RELATING TO:
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO:
TITLE OF INVENTION: AERUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
FILE REFERENCE: 107196.136
CURRENT FILING DATE: 1999-02-18
PRIOR APPLICATION NUMBER: US/60/074,788
PRIOR APPLICATION NUMBER: US/60/074,788
PRIOR APPLICATION NUMBER: US/60/094,190
PRIOR APPLICATION NUMBER: US/60/094,190
PRIOR FILING DATE: 1998-07-27
NUMBER OF SEQ ID NOS: 33142
SEQ ID NO 21441
LENGTH: 135
TYDE: PRT
ORGANISM: PBEUDOMONDAS AERUGINOSA
                                                                                                                                                                                                                                                                                                                                                       RESULT 2

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Equimolar amounts of the A, B, and C chains are found after reductions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    complement protein Clq beta chain precursor - C;Species: Rattus norvegicus (Norway rat) C;Date: 16-Feb-1995 #sequence_revision 12-May-C;Accession: S49158 C;Schwaeble, W.; Petry, F.; Loos, M.

C;Comment: The first component of complement is a calcium-dependent complex of the three ivation of C1r (enzyme), C1s (proenzyme), and the other eight components of complement.
C;Comment: The C1q subcomponent is composed of nine subunits, six of which are disulfide dimers of the C chain. Equimolar amounts of the A, B, and C chains are found after reductions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     S

C;Comment: The first component of complement is a calcium-dependent complex of the thre ivation of C1r (enzyme), C1s (proenzyme), and the other eight components of complement. C;Comment: The C1q subcomponent is composed of nine subunits, six of which are disulfice (see PIR:C1HUQC) chain. Equimolar amounts of the A, B, and C chains are found after red
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          A;Molecule type: protein
